

# RACE/RALLY HIGH FRICTION

- High friction levels even at cold temperatures
- High temperature ability – up to 800degC
- Suitable for club rally to WRC!
- Excellent modulation for driver control
- Low fade characteristics for long stages

M119 is a specially formulated brake pad for gravel and tarmac rally use, as well as circuit racing where low temperature performance is required. The compound has been rigorously tested in top level machinery including WRC, S2000 and GpN as well as historic. M119 displays excellent resistance to fade for those longer stages and races, whilst offering brilliant levels of low temperature friction.

**Temp Range**  
**50-800°C**

**Friction**  
**0.48-0.51Mu**

**Material**  
**Carbon Metallic**

**Notes**  
**High Friction**
